QUESTION 108 Scenario: A call center has deployed Access Gateway Enterprise to provide its employees with access to work resources from home. Due to the number of available licenses, only selected employees should access the environment remotely based on their user account information. How could the engineer configure access to meet the needs of this scenario? A. Configure a Pre-authentication Policy. B. Configure an Authentication Server using a search filter. C. Configure an Authentication Policy using Client based expressions. D. Add the selected employee accounts to the Local Authentication policy. **Answer: B**

QUESTION 109 How could an engineer configure a monitor to ensure that a server is marked as DOWN if the monitor test is successful? A. Enable the LRTM option for the monitor. B. Enable the Reverse option for the monitor. C. Disable Down state flush for the service group. D. Disable the Health monitoring option for the service group. **Answer: B**

QUESTION 110 A network engineer should use a HTTP-ECV monitor type to control the status of a load balanced web server resource when _____. (Choose the correct option to complete the sentence.) A. checking for multiple HTTP response codes B. wanting to use a customized HTTP Request C. checking for a specific pattern in the HTTP Response body D. checking for a specific pattern in the HTTP Response header **Answer: C**

QUESTION 111 Scenario: A network engineer has created and bound an UDP-ECV monitor to identify the status of a UDP service. However, no matter what the response is, the service is always marked as UP. A possible cause of this behavior is that the network engineer _____. (Choose the correct option to complete the sentence.) A. forgot to add a receive string B. added the string ns_true as receive string C. added a string that is invalid and thus skipped D. added a string that is always part of the UDP handshake **Answer: A**

QUESTION 112 While performing some re-cabling, a NetScaler engineer noticed that a power supply unit failed on a NetScaler appliance. What should the engineer enable to receive notification of a future hardware failure? A. SMTP B. SNMP C. Health monitoring D. EdgeSight monitoring **Answer: B**

QUESTION 113 A network engineer selected the option on a SSL certificate to provide notification upon expiration of the certificate; however when a certificate expires, NO notification is sent to the engineer. Which step could the engineer take to enable notification? A. Configure SNMP. B. Create a SSL policy. C. Enable the SSL offload feature. D. Ensure that the certificate is linked to a Root certificate. **Answer: A**

QUESTION 114 What type of protocol does AppFlow use for reporting? A. TCP B. UDP C. HTTP D. SSL_TCP **Answer: B**

QUESTION 115 A network engineer wants to collect performance statistics regarding the traffic between different points in the connection, specifically from client-to-NetScaler and from NetScaler to back-end server, and be able to present this to different analysis tools. Which feature on the NetScaler could the engineer use for this? A. Syslog B. nstrace C. AppFlow D. nsconmsg **Answer: C**

QUESTION 116 A network engineer has been tasked with identifying the cause of intermittent network connectivity issues. Which command should the engineer use to generate the necessary network information required to diagnose the connectivity issues? A. nslog B. nstrace C. nsumon D. nsconmsg **Answer: B**

QUESTION 117 A NetScaler implementation is experiencing intermittent network issues, specifically regarding traffic to a back-end service associated with IP address 10.10.1.86. Which command should a network engineer execute to generate diagnostic information to investigate this issue? A. traceroute 10.10.1.86 B. show run | grep 10.10.1.86 C. nstcpdump.sh host 10.10.1.86 D. show service 10.10.1.86 -summary **Answer: C**

QUESTION 118 A network engineer needs to investigate why a few users have issues logging on to the NetScaler system. How can the engineer troubleshoot authentication issues on the NetScaler system? A. Use ECV monitoring. B. Run a violations report in Reporting. C. Use the CAT aaad.debug command. D. Check the system-authentication setting in the GUI. **Answer: C**
