Download:https://drive.google.com/drive/folders/0B75b5xYLjSSNekdxX05OVnFXRXc?usp=sharingQUESTION 77Stateful and traditional firewalls can analyze packets and judge them against a set of predetermined rules called access control lists (ACLs).They inspect which of the following elements within a packet? (Choose Two)A.   Session headersB.   NetFlow flow informationC.   Source and destination ports and source and destination IP addressesD.   Protocol information**Answer: CD**QUESTION 78In which case should an employee return his laptop to the organization?A.   When moving to a different roleB.   Upon termination of the employmentC.   As described in the asset return policyD.   When the laptop is end of lease**Answer: C**QUESTION 79Which of the following are metrics that can measure the effectiveness of a runbook?A.   Mean time to repair (MTTR)B.   Mean time between failures (MTBF)C.   Mean time to discover a security incidentD.   All of the above**Answer: D**QUESTION 80Which of the following access control models use security labels to make access decisions?A.   Mandatory access control (MAC)B.   Role-based access control (RBAC)C.   Identity-based access control (IBAC)D.   Discretionary access control (DAC)Answer: AExplanation: MAC uses security labels for access decisions.QUESTION 81Where are configuration records stored?A.   In a CMDBB.   In a MySQL DBC.   In a XLS fileD.   There is no need to store them**Answer: A**QUESTION 82Which of the following is true about heuristic-based algorithms?A.   Heuristic-based algorithms may require fine tuning to adapt to network traffic and minimizethe possibility of false positives.B.   Heuristic-based algorithms do not require fine tuning.C.   Heuristic-based algorithms support advanced malware protection.D.   Heuristic-based algorithms provide capabilities for the automation of IPS signature creation and tuning.**Answer: A**QUESTION 83How many broadcast domains are created if three hosts are connected to a Layer 2 switch in full-duplex mode?A.   4B.   3C.   NoneD.   1**Answer: D**QUESTION 84What is one of the advantages of the mandatory access control (MAC) model?A.   Stricter control over the information access.B.   Easy and scalable.C.   The owner can decide whom to grant access to.D.   Complex to administer.Answer: AExplanation:Strict control over the access to resources is one of the main advantages of MAC.QUESTION 85According to the attribute-based access control (ABAC) model, what is the subject location considered?A.   Part of the environmental attributesB.   Part of the object attributesC.   Part of the access control attributesD.   None of the above**Answer: A**QUESTION 86What type of algorithm uses the same key to encryp and decrypt data?A.   a symmetric algorithmB.   an asymetric algorithmC.   a Public Key infrastructure algorithmD.   an IP Security algorithm**Answer: A**QUESTION 87Which actions can a promiscuous IPS take to mitigate an attack?A.   modifying packetsB.   requesting connection blockingC.   denying packetsD.   resetting the TCP connectionE.   requesting host blockingF.   denying frames**Answer: BDE**
