[https://drive.google.com/drive/folders/158WUUGRZnUXf26mgaHiG-fgdQQ\\_aVDmp?usp=sharing](https://drive.google.com/drive/folders/158WUUGRZnUXf26mgaHiG-fgdQQ_aVDmp?usp=sharing)QUESTION 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen. You use ASP.NET Core MVC with ADO.NET to develop an application. You implement database sharding for the application by using Azure SQL Database. You establish communication links between the shard databases. You need to implement a strategy that allows a group of operations that are performed on multiple Azure databases to be rolled back on all databases if any of the operations fail. Solution: Deploy a SQL database instance in an Azure Virtual Machine (VM).- Establish linked servers to each Azure SQL Database instance from the SQL Server instance in the VM.- Create a stored procedure in the VM that performs the update operations using a distributed transaction and commits them if successful.- Run the SQL stored procedure on the SQL Server instance in the VM. Does the solution meet the goal? A. Yes B. No **Answer: A**QUESTION 2Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:- Provide access to the full .NET framework.- Provide redundancy if an Azure region fails.- Grant administrators access to the operating system to install custom application dependencies. Solution: You deploy an Azure virtual machine to two Azure regions, and you create a Traffic Manager profile. Does this meet the goal? A. Yes B. No **Answer: A**QUESTION 3Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen. You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:- Provide access to the full .NET framework.- Provide redundancy if an Azure region fails.- Grant administrators access to the operating system to install custom application dependencies. Solution: You deploy a web app in an Isolated App Service plan. Does this meet the goal? A. Yes B. No **Answer: A**QUESTION 4Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen. You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the requirements:- Provide access to the full .NET framework.- Provide redundancy if an Azure region fails.- Grant administrators access to the operating system to install custom application dependencies. Solution: You deploy a virtual machine scale set that uses auto scaling. Does this meet the goal? A. Yes B. No **Answer: B**QUESTION 5You create a social media application that users can use to upload images and other content. Users report that adult content is being posted in an area of the site that is accessible to and intended for young children. You need to automatically detect and flag potentially offensive content. The solution must not require any custom coding other than code to scan and evaluate images. What should you implement? A. Bing Visual Search B. Image Moderation C. Custom Vision Search D. Bing Web Search **Answer: A**QUESTION 6You are creating an IoT solution using Azure Time Series Insights. You configure the environment to ensure that all data for the current year is available. What should you do? A. Set a value for the Data Retention time setting. B. Change the pricing tier. C. Add a disaster recovery (DR) strategy. D. Create a reference data set. **Answer: D**QUESTION 7A company is creating an IoT solution for connecting to smart refrigerators. You plan to use the Azure IoT Hub Device Provisioning Service for this process. You need to provision the devices automatically. Which feature of Device Provisioning Service should you use? A. Delivery and retry B. Device enrollment C. Error policy D. Remote monitoring **Answer: C**QUESTION 8You plan to use Azure Site Recovery to protect several on-premises physical server workloads. Each server workload is independent of the other. The workloads are stateless. You need to recommend a failover strategy to ensure that if the on-premises data center fails, the workloads are available in Azure as quickly as possible. Which failover strategy should you include in the recommendation? A. Latest app-consistent B. Latest C. Latest processed D. Latest multi VM processed **Answer: A**QUESTION 9You plan to deploy a payroll

system to Azure. The payroll system will use Azure virtual machines that run SUSE Linux Enterprise Server and Windows. You need to recommend a business continuity solution for the payroll system. The solution must meet the following requirements:-  
Minimize costs.- Provide business continuity if an Azure region fails.- Provide a recovery time objective (RTO) of 30 minutes.- Provide a recovery point objective (RPO) of five minutes. What should you include in the recommendation?  
A.Microsoft System Center Data Protection Manager (DPM)  
B.Azure Site Recovery  
C.Azure Backup  
D.unmanaged disks that use geo-redundant storage (GRS)  
**Answer:** D  
**QUESTION 10**  
Members of the finance department for a company review and make changes to a Microsoft Excel workbook that is hosted on OneDrive. The workbook contains projected costs and revenue for a project. You need to develop an Azure Function that ingests data from the modified workbook and places it into a Microsoft Word document. Which two objects should you implement? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.  
A.An Excel table output binding  
B.A group conversation subscription  
C.A group subscription  
D.An auth token input binding  
E.An Excel table input binding  
**Answer:** BE  
**!!!RECOMMEND!!!!**
