New QuestionYou use Azure virtual machines to run a custom application that uses an Azure SQL database on the back end. The IT apartment at your

company recently enabled forced tunneling. Since the configuration change, developers have noticed degraded performance when

they access the database. You need to recommend a solution to minimize latency when accessing the database. The solution must

minimize costs. What should you include in the recommendation?A. Azure SQL Database Managed instanceB. Azure virtual

machines that run Microsoft SQL Server serversC. Always On availability groupsD. virtual network service endpoint

**Answer: D** New QuestionYou have 100 Microsoft SQL Server Integration Services (SSIS) packages that are configured to use 10 on-premises

SQL Server databases as their destinations. You plan to migrate the 10 on-premises databases to Azure SQL Database. You need to

recommend a solution to host the SSIS packages in Azure. The solution must ensure that the packages can target the SQL Database

instances as the\* destinations. What should you include in the recommendation?A. Azure Data CatalogB. SQL Server Migration

Assistant (SSMS)C. Data Migration AssistantD. Azure Data Factory

**Answer: A** New QuestionYou need to recommend a solution to generate a monthly report of all the new Azure Resource Manager resource deployments in your subscription. What

should you include in the recommendation?A. Azure Activity LogB. Azure Monitor action groupsC. Azure AdvisorD. Azure

Monitor metrics

**Answer: C** Explanation: Azure Advisor is your personalized cloud service for Azure best practices that will help you

optimize Azure resources for high availability, security, performance, and cost. Advisor will bring an all-new dashboard to help you

more easily review the overall status of your recommendations across multiple subscriptions, along with downloadable reports and

customization options to tune Advisor to your needs. You will be able to tag resource groups that you will want included in

recommendations (for example, you'll be able to exclude non-production workloads), and adjust the CPU utilization threshold for

identifying low usage virtual machines for each subscription.

New QuestionYou have 100 Standard F2vs-v2 Azure virtual machines. Each virtual machine has two network adapter. You need to increase the network performance of the workloads running

on the virtual machine. The solution must meet the following requirements:- The CPU-to-memory ratio must remain the same.- The

solution must minimize costs. What should you do?A. Enable SRIOVB. Enable ROMA over InfiniBandC. Install an additional

network adapter.D. Configure NIC teaming.

**Answer: A** New QuestionYour company has several Azure subscriptions that are part

of a Microsoft Enterprise Agreement. The company's compliance team creates automatic alerts by using Ware Monitor. You need to

recommend a solution to apply the alerts automatically when new subscriptions are added to the Enterprise agreement. What should

you include in the recommendation?A. Azure PokeyB. Azure Resource Manager templatesC. Azure log Analytics alertsD.

Azure Monitor action groupsE. Azure Automation runboote

**Answer: D** New QuestionYour company has 300 virtual machines hosted in a VMWare environment. The virtual machines vary in size and have various utilization levels. You plan to move all the

virtual machines to Azure. You need to recommend how many and what size Azure virtual machines will be required to move the

current workloads to Azure. The solution must minimize administrative effort. What should you use to make the recommendation?A.

Azure Cost ManagementB. Azure MigrateC. Azure pricing calculatorD. Azure Advisor recommendations

**Answer: B** New QuestionYou have Azure virtual machines that run a custom line-business web application. You plan to use a third-party solution to

parse event logs from the virtual machine stored in an Azure storage account. You need to recommend a so to save the event logs

from the virtual. What should you include in recommendation?A. Azure VM Diagnostics ExtensionB. Azure MonitorC. Azure

log AnalyticsD. event log subscriptions

**Answer: A** Explanation:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/extensions-diagnostics>

New QuestionYou have .NeT web service named service1 that has the following requirements. Must read and write to the local file system. Must write to the Windows

Application event log. You need to recommend a solution to host Service1 in Azure. The solution must meet the following

requirements:- Minimize maintenance overhead.- Minimize costs. What should you include in the recommendation?A. an Azure

web appB. Azure functionC. an App service EnvironmentD. an Azure virtual machine scale set

**Answer: B** New QuestionYou are designing a container solution in azure that will include two containers. One container will host a web API that will be available

to the public. The other container will perform health monitoring of the web API and will remain private. The two containers will be

deployed together as a group. You need to recommend a compute service for the containers. The solution must minimize costs and

maintenance over head. What should you include in the recommendation?A. Azure container instancesB. Azure container

ServiceC. Azure kubernetes service (aks)D. Azure service fabricAnswer: AExplanation:References:  
<https://docs.microsoft.com/en-us/azure/container-instances/container-instances-container-groups>New QuestionNote: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:- Provide access to the full .NET framework.- Provide redundancy if an Azure region fails.- Grant administrators access to the operating system to install custom application dependencies. Solution: You deploy an Azure virtual machine to two Azure regions, and you create a Traffic Manager profile. Does this meet the goal?A. YesB. NoAnswer: ANew QuestionNote: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You need to deploy resources to host a stateless web app in an Azure subscription. The solution must meet the following requirements:- Provide access to the full .NET framework.- Provide redundancy if an Azure region fails.- Grant administrators access to the operating system to install custom application dependencies. Solution: You deploy a web app in an Isolated App Service plan. Does this meet the goal?A. YesB. NoAnswer: BExplanation: Instead, you should deploy an Azure virtual machine to two Azure regions, and you create a Traffic Manager profile. !!!RECOMMEND!!!1.|2019 Latest Braindump2go AZ-301 Exam Dumps (PDF & VCE) Instant Download:<https://www.braindump2go.com/az-301.html>2.|2019 Latest Braindump2go AZ-301 Study Guide Video Instant Download: YouTube Video: [YouTube.com/watch?v=aW45-h78Ew8](https://www.youtube.com/watch?v=aW45-h78Ew8)
