New Question You have an Azure subscription named Subscription1 that contains two Azure networks named VNet1 and VNet2. VNet1 contains a VPN gateway named VPNGW1 that uses static routing. There is a site-to-site VPN connection between your on-premises network and VNet1. On a computer named Client1 that runs Windows 10, you configure a point-to-site VPN connection to VNet1. You configure virtual network peering between VNet1 and VNet2. You verify that you can connect to VNet2 from the on-premises network. Client1 is unable to connect to VNet2. You need to ensure that you can connect Client1 to VNet2. What should you do?
A. Select Allow gateway transit on VNet1B. Download and re-install the VPN client configuration package on Client1C. Enable BGP on VPNGW1D. Select Allow gateway transit on VNet2.

Answer: B **Explanation:** References:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-about-point-to-site-routing>

New Question Your company has offices in New York and Los Angeles. You have an Azure subscription that contains an Azure virtual network named VNet1. Each office has a site-to-site VPN connection to VNet1. Each network uses the address spaces shown in the following table: You need to ensure that all Internet-bound traffic from VNet1 is routed through the New York office. What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
Answer: New Question You have a Microsoft SQL Server Always On availability group on Azure virtual machines. You need to configure an Azure internal load balancer as a listener for the availability group. What should you do?
A. Create an HTTP health probe on port 1433B. Set Session persistence to Client IP.C. Set Session persistence to Client IP and protocol.D. Enable Floating IP.

Answer: D **Explanation:** References:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/sql/virtual-machines-windows-portal-sql-always-on-int-listener>

New Question You set the multi-factor authentication status for a user named admin1@contoso.com to Enabled. Admin1 accesses the Azure portal by using a web browser. Which additional security verifications can Admin1 use when accessing the Azure portal?
A. an app password, a text message that contains a verification code, and a verification code sent from the Microsoft Authenticator appB. a phone call, a text message that contains a verification code, and a notification or a verification code sent from the Microsoft Authenticator appC. a phone call, an email message that contains a verification code, and a text message that contains an app passwordD. an app password, a text message that contains a verification code, and a notification sent from the Microsoft Authenticator app

Answer: B **Explanation:** References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods>

New Question You have an Azure Active Directory (Azure AD) tenant. All administrators must enter a verification code to access the Azure portal. You need to ensure that the administrators can access the Azure portal only from your on-premises network. What should you configure?
A. the default for all the roles in Azure AD Privileged Identity ManagementB. an Azure AD Identity Protection user risk policyC. an Azure AD Identity Protection sign-in risk policyD. the multi-factor authentication service settings

Answer: D **Explanation:** References:<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-mfasettings>

New Question You have an Azure subscription named Subscription1 that contains a virtual network named VNet1. VNet1 is in a resource group named RG1. Subscription1 has a user named User1. User1 has the following roles: Reader, Security Admin, Security Reader.

You need to ensure that User1 can assign the Reader role for VNet1 to other users. What should you do?
A. Assign User1 the Owner role for VNet1B. Assign User1 the Network Contributor role for VNet1C. Remove User1 from the Security Reader and Reader roles for Subscription1.

Assign User1 the Contributor role for Subscription1.D. Remove User1 from the Security Reader and Reader roles for Subscription1.

Answer: A **New Question** You are building a custom Azure function app to connect to Azure Event Grid. You need to ensure that resources are allocated dynamically to the function app. Billing must be based on the executions of the app. What should you configure when you create the function app?
A. the Windows operating system and the App Service plan hosting planB. the Docker container and an App Service plan that uses the B1 pricing tierC. the Windows operating system and the Consumption plan hosting planD. the Docker container and an App Service plan that uses the S1 pricing tier

Answer: C **Explanation:** References:<https://docs.microsoft.com/en-us/azure/azure-functions/functions-scale>

New Question You have an Azure Service Bus. You need to implement a Service Bus queue that guarantees first-in-first-out (FIFO) delivery of messages. What should you do?
A. Enable partitioningB. Enable duplicate detectionC. Set the Lock Duration setting to 10 secondsD. Enable sessionsE. Set the Max Size setting of the queue to 5 GB

Answer: D **Explanation:** References:

<https://docs.microsoft.com/en-us/azure/service-bus-messaging/service-bus-azure-and-service-bus-queuescompared-contrasted>

New Question DRAG DROPS You are developing a web app that uses a REST interface to connect to Azure Storage with HTTPS. This app uploads and streams video content that can be accessed from anywhere in the world. You have different storage requirements for each part of the app. A hierarchical namespace must be created. Which storage services should you implement? To answer, select the appropriate services to the correct actions. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Answer: **New Question** You create an Azure Time Series Insights event handler. You need to send data over the network as efficiently as possible and optimize query performance. What should you do?

- A. Create a query plan
- B. Send all properties
- C. Use a Tag ID
- D. Use reference data
