FabRA1 will use the RADIUS proxy for authentication. You need to ensure that VPN clients can be authenticated and can access internal resources. The solution must ensure that FabRS1 is used as a RADIUS server and FabRP1 is used as a RADIUS proxy. Which two actions should you perform? Each correct answer presents part of the solution.

A. Create a connection request policy on FabRS1.B. Create a connection request policy on FabRP1.C. Create a network policy on FabRS1.D. Delete the default connection request policy on FabRS1.E. Create a network policy on FabRP1.

Answer: BC

QUESTION 126Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You network contains an Active Directory domain named contoso.com. The domain contains a member server named Server1 that runs Windows Server 2016 and has the DNS Server role installed. Automatic scavenging of state records is enabled and the scavenging period is set to 10 days. All client computers dynamically register their names in the contoso.com DNS zone on Server1. You discover that the names of multiple client computers that were removed from the network several weeks ago can still be resolved. You need to configure Server1 to automatically remove the records of the client computers that have been offline for more than 10 days.

Solution: You set the Expires after value of the zone. Does this meet the goal?

A. YesB. No

Answer: Explanation:
[https://technet.microsoft.com/en-us/library/cc772069\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/cc772069(v=ws.11).aspx)QUESTION 127Hotspot Question Server1 provides DNS name resolution to both internal and external clients. Server1 hosts the primary zone for contoso.com. You need to configure Server1 to meet the following requirements:
* Internal clients must be able to use Server1 to resolve internal-based DNS names.
* External clients must not be able to use Server1 to resolve internal-based DNS names.
* External clients must be able to use Server1 to resolve names in the contoso.com zone.

Which commands should you run on Server1? To answer, select the appropriate option in the answer area.

Answer: Explanation:
<https://docs.microsoft.com/en-us/powershell/module/dnsserver/add-dnsserverqueryresolutionpolicy?view=win10-ps>

QUESTION 128Hotspot Question Refer to Exhibit: \Server1.adatum.com\Namespace1 has a folder target named Folder1. A user named User1 has Full Control share and NTFS permissions to Folder1. Folder1 contains a file named File1.doc. User1 has only Write NTFS permissions to File1.doc. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

Answer: QUESTION 129Hotspot Question You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has two network adaptors named NK1 and NIC2. Server2 has two virtual switches named vSwitch1 and vSwitch2.

NK1 connects to vSwitch1. NIC2 connects to vSwitch2. Server1 hosts a virtual machine named VM1. VM1 has two network adapters named vmNIC1 and vmNIC2. vmNIC1 connects to vSwitch1. vmNIC2 connects to vSwitch2. You need to create a NIC team on VM1. What should you run on VM1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer: QUESTION 130Hotspot Question Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. Server1 is configured to use a forwarder named

server2.contoso.com that has an IP address of 10.0.0.10. You need to prevent Server1 from using root hints if the forwarder is unavailable.

What command should you run? To answer, select the appropriate options in the answer area.

Answer: Explanation:
<https://docs.microsoft.com/en-us/powershell/module/dnsserver/set-dnsserverforwarder?view=win10-ps>

QUESTION 131Hotspot Question On a DNS server that runs Windows Server 2016, you plan to create two new primary zones named adatum.com and contoso.com. You have the following requirements for the zones:- Ensure that computers on your network can register records automatically in the adatum.com zone.

- Ensure that records that are stale for two weeks are purged automatically from the contoso.com zone.

What should you configure for each zone? To answer, select the appropriate options in the answer area.

Answer: Explanation:
[https://technet.microsoft.com/en-us/library/cc771255\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/cc771255(v=ws.11).aspx)

QUESTION 132Hotspot Question Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. You enable Response Rate Limiting on Server1. You need to prevent Response Rate Limiting from applying to hosts that reside on the network of 10.0.0.0/24. Which cmdlets should you run? To answer, select the appropriate options in the answer area.

Answer: Explanation:
<https://docs.microsoft.com/en-us/powershell/module/dnsserver/set-dnsserverforwarder?view=win10-ps>

RRL is working (You enable Response Rate Limiting on Server1.) So no need to enable it anyway.What is needed to a subnet and then the subnet is used in exception definition.QUESTION 133Hotspot QuestionYou are configuring internal virtual networks to support multitenancy communication between tenant virtual machine networks and remote sites.You have a tenant named Tenant1. You need to enable Border Gateway Protocol (BGP) for Tenant1.Which commands should you run? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point. Answer: QUESTION 134Hotspot Question You have two servers named Server1 and Server2 that run Windows Server 2016.Server1 has the DNS Server role installed. The advanced DNS properties for Server1 are shown in the Advanced DNS exhibit. (Click the Exhibit button.)Server2 is configured to use Server1 as a DNS server. Server2 has the following IP configuration. Advanced DNS DNS Manager Select the appropriate selection if statement is "Yes" or No. Answer: QUESTION 135You have an IP Address Management (IPAM) server named IPAM1 that runs Windows Server 2016. IPAM1 manages 10 DHCP servers.You need to provide a user with the ability to track which clients receive which IP addresses from DHCP. The solution must minimize administrative privileges.A. IPAM MSM AdministratorsB. IPAM ASM AdministratorsC. IPAM IP Audit AdministratorsD. IPAM UserAnswer: CExplanation: [https://technet.microsoft.com/en-us/library/jj878348\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/jj878348(v=ws.11).aspx)!!!RECOMMEND!!!1.|2018 Latest 70-741 Exam Dumps (PDF & VCE) 180Q Download:<https://www.braindump2go.com/70-741.html>2.|2018 Latest 70-741 Exam Questions & Answers Download:<https://drive.google.com/drive/folders/0B75b5xYLjSSNSUt4dmtFZ2pDQkk?usp=sharing>
