Each office has a Mailbox server. The company has a Microsoft Exchange Server 2019 hybrid deployment that uses a namespace of litware.com. Currently, all email messages received from the Internet are routed from Exchange Online to the New York office. You need to ensure that messages sent to users in the Los Angeles office are routed from Exchange Online directly to the local Mailbox server in the Los Angeles office. What should you create in Exchange Online?  
A. a remote domain and a client access rule.B. a connector and a remote domainC. a connector and a mail flow ruleD. an email address policy and a client access rule  
**Answer: C** QUESTION 23 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your company has a Microsoft Exchange Server 2019 server named EX01. EX01 has the default Receive connectors. EX01 receives Internet email on port 25 from an appliance in the company's perimeter network. The company has an application named App1 that can only send email on port 25. The application administrator requests that you enable App1 to route email through EX01 for delivery. You need to ensure that EX01 only accepts email from the appliance and App1.  
**Solution:** You create a new remote domain and set the domain name to App1. You create a new delivery agent connector and set the IsScopedConnector property to \$true. Does this meet the goal?  
A. YesB. No
