Download:<https://drive.google.com/drive/folders/0B75b5xYLjSSNUWExVVZGMnVPVIU?usp=sharing>QUESTION 325Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You plan to enable access to a blob storage account for external clients. The access method must include an expiration time and clients should not be able to access other storage services. You need to provide access to the storage account. Solution: You create a storage account resource type configured as a shared access signature. Does the solution meet the goal?A. YesB. NoAnswer: AExplanation:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-dotnet-shared-access-signature-part-1?toc=%2fazure%2fstorage%2fblobs%2ftoc.json>QUESTION 326A company plans to deploy Linux virtual machines (VM) in Azure. The VM configuration and applications must be managed automatically. You need to propose a solution to configure and manage the VMs. What should you recommend?A. Resource Manager TemplatesB. Azure AD ConnectC. ChefD. Azure Command-Line Interface (CLI)Answer: DExplanation:<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/tutorial-manage-vm>

QUESTION 327Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. A company plans to use Operations Management Suite (OMS) to track changes within virtual machines (VMs). The company requires that data collection occur at least every 15 minutes. You need to recommend a solution to monitor VMs which ensures that data collection occurs at least every 15 minutes. Solution: Monitor files on Windows VMs. Does the solution meet the goal?A. YesB. NoAnswer: BExplanation:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/monitor>QUESTION 328A company has an Azure subscription and hosts a virtual network in the cloud. The company uses authenticated web proxies on their local network. You need to grant two specific users on the local network access to the virtual network. Which three steps must you perform on the two local machines? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.A. Upload an X.509 certificate to the virtual network.B. Configure multifactor access control on the virtual network.C. Enable Direct Access on the local devices.D. Create an exception to the authentication proxy.E. Download and install the VPN client package from the Azure Management Portal.F. Install an X.509 certificate on the local devices.Answer: DEFExplanation:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-howto-point-to-site-classic-azure-portal>QUESTION 329You are designing a web app deployment in Azure. You need to ensure that inbound requests to the web app are routed based on the endpoint that has the lowest latency. What should you use?A. Azure Traffic ManagerB. Azure Fabric ControllerC. Azure Load BalancerD. Azure health probesAnswer: AExplanation:

<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-load-balancing-azure>

<https://docs.microsoft.com/en-us/azure/traffic-manager/traffic-manager-monitoring>QUESTION 330You manage network routes in an Azure subscription. You have the following routes: You observe that traffic destined to the IP address 192.168.1.0 is being sent to the IP address 10.10.5.5. You need to ensure that the user-defined route takes precedence. What should you do?A. Add the user-defined route to the Border Gateway Protocol (BGP) table.B. Delete and recreate the user-defined route.C. Set the next hop of the user-defined route to the IP address 10.10.5.5.D. Set the user-defined route subnet mask to the IP address 255.255.255.0.Answer: CQUESTION 331You are a developer for a company that produces bug tracking software. The software runs on customer provisioned virtual machines (VMs) running in Azure, including deployments within private Azure Virtual Networks. The software has the following requirements for the runtime environment, if any of these components are missing or not configured correctly, the application will not function correctly.- User groups named bug_users and bug_admins- a log file location at c:buglogs- a registry key that contains the license keys- Visual C++ runtime components- a Windows service named BugCleanup You need to provide a mechanism to distribute the application to customers that ensures that the application always functions correctly. What should you do?A. Provide a VM image to customers.B. Provide an Azure Resource Manager template that

contains logic to ensure application requirements are met.C. Convert the application to a ClickOnce application and distribute the URL of the application to customers.D. Provide an Azure Resource Manager template to customers with an Azure PowerShell DSC script that installs the application and configures the VM.

Answer: BExplanation:
<https://docs.microsoft.com/en-us/azure/service-fabric/service-fabric-application-arm-resource>QUESTION 332A company plans to deploy Linux virtual machines (VM) in Azure. The VM configuration and applications must be managed automatically. You need to propose a solution to configure and manage the VMs. What should you recommend?A. PuppetB. Resource Manager TemplatesC. Azure PowerShellD. Azure AD Connect

Answer: CExplanation:
<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/quick-create-powershell>QUESTION 333Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals: Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You plan to enable access to a blob storage account for external clients. The access method must include an expiration time and clients should not be able to access other storage services. You need to provide access to the storage account. Solution: You create a new Azure Key Vault. Does the solution meet the goal?A. YesB. No

Answer: BExplanation:
<https://docs.microsoft.com/en-us/azure/storage/common/storage-dotnet-shared-access-signature-part-1?toc=%2fazure%2fstorage%2fblobs%2ftoc.json>QUESTION 334Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals: Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You plan to enable access to a blob storage account for external clients. The access method must include an expiration time and clients should not be able to access other storage services. You need to provide access to the storage account. Solution: You regenerate the storage account keys. Does the solution meet the goal?A. YesB. No

Answer: BExplanation:
<https://docs.microsoft.com/en-us/azure/storage/common/storage-dotnet-shared-access-signature-part-1?toc=%2fazure%2fstorage%2fblobs%2ftoc.json>QUESTION 335A company has a hybrid environment. The public IP address of the on-premises environment is 40.84.199.233. The company deploys virtual machines (VMs) to Azure on different subnets. You need to ensure that the Azure VMs can communicate with the on-premises environment. What should you create?A. a Border Gateway Protocol (BGP) route by using ExpressRouteB. an Internet rule for each subnetC. a local vNet rule for each subnetD. a user defined route to 40.84.199.233/0

Answer: AExplanation:
<https://docs.microsoft.com/en-us/azure/expressroute/expressroute-introduction>
