

Official 2014 Latest Microsoft 70-413 Exam Dump Free Download(91-97)!

QUESTION 91 Your network contains an Active Directory forest named contoso.com. The forest is managed by using Microsoft System Center 2012. Web developers must be able to use a self-service portal to request the deployment of virtual machines based on predefined templates. The requests must be approved by an administrator before the virtual machines are deployed. You need to recommend a solution to deploy the virtual machines. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer. A. A Virtual Machine Manager (VMM) service template, a Service Manager service offering, and an Orchestrator runbook B. A Virtual Machine Manager (VMM) service template, an Operations Manager dashboard, and an Orchestrator runbook C. A Service Manager service offering, an Orchestrator runbook, and Configuration Manager packages D. A Service Manager service offering, an Orchestrator runbook, and an Operations Manager dashboard Answer: A

QUESTION 92 You have a server named Server1 that runs Windows Server 2012. Server1 has the DNS Server server role installed. You need to recommend changes to the DNS infrastructure to protect the cache from cache poisoning attacks. What should you configure on Server1? A. DNS devolution B. DNS Security Extensions (DNSSEC) C. DNS cache locking D. The global query block list Answer: C

QUESTION 93 Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Network Policy Server server role installed. You configure Server1 as part of a Network Access Protection (NAP) solution that uses the 802.1x enforcement method.

You add a new switch to the network and you configure the switch to use 802.1x authentication. You need to ensure that only compliant client computers can access network resources through the new switch. What should you do on Server1? A. Add the IP address of each new switch to the list of RADIUS clients. B. Add the IP address of each new switch to a connection request policy as an Access Client IPv4 Address. C. Add the IP address of each new switch to a remote RADIUS server group. D. Add the IP address of each new switch to a remediation server group. Answer: A

QUESTION 94 Your network contains an Active Directory domain named contoso.com. All client computers run either Windows 7 or Windows 8. Some users work from customer locations, hotels, and remote sites. The remote sites often have firewalls that limit connectivity to the Internet. You need to recommend a VPN solution for the users. Which protocol should you include in the recommendation? A. L2TP/IPSec B. PPTP C. IKEV2 D. SSTP Answer: D

QUESTION 95 Your network contains an Active Directory domain named contoso.com. Your company has 100 users in the sales department. Each sales user has a domain-joined laptop computer that runs either Windows 7 or Windows 8. The sales users rarely travel to the company's offices to connect directly to the corporate network. You need to recommend a solution to ensure that you can manage the sales users' laptop computers when the users are working remotely. What solution should you include in the recommendation? A. Deploy a Microsoft System Center 2012 Service Manager infrastructure. B. Deploy the Remote Access server role on a server on the internal network. C. Deploy the Network Policy and Access Services server role on a server on the internal network. D. Deploy a Microsoft System Center 2012 Operations Manager infrastructure. Answer: B

QUESTION 96 Your network contains an Active Directory forest named contoso.com. The forest contains five domains. You need to ensure that the CountryCode attribute is replicated to the global catalog. What should you do? A. Modify the configuration partition. B. Create and modify an application partition. C. Modify the schema partition. D. Modify the domain partitions. Answer: C

QUESTION 97 Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2008 R2. All domain controllers are installed on physical servers. The network contains several Hyper-V hosts. The network contains a Microsoft System Center 2012 infrastructure. You plan to use domain controller cloning to deploy several domain controllers that will run Windows Server 2012. You need to recommend which changes must be made to the network infrastructure before you can use domain controller cloning. What should you recommend?

A. Upgrade the domain controller that has the infrastructure master operations master role to Windows Server 2012. Install the Windows Deployment Services server role on a server that runs Windows Server 2012. B. Upgrade the domain controller that has the PDC emulator operations master role to Windows Server 2012. Deploy a Hyper-V host that runs Windows Server 2012. C. Upgrade a global catalog server to Windows Server 2012. Install the Windows Deployment Services server role on a server that runs Windows Server 2012. D. Upgrade a global catalog server to Windows Server 2012. Deploy Virtual Machine Manager (VMM). Answer: B
