The datacenters are hosted in Seattle, Montreal, and Orlando. You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure. You open the VMM Administrator Console as shown in the Administrator Console exhibit. A user who is a member of the User1 role opens the VMM Administrator Console as shown in the User1 Console exhibit. You need to ensure that User1 can view the servers in the Seattle host group. What should you configure from the VMM Administrator Console? A. the General property of the Seattle host group B. the Run As Accounts property of User1 C. the Access property of a Run As Account D. the Scope property of User1 Answer: D Explanation:

The actual exam exhibit shows admin console with all three Clouds listed where User1's console only has Montreal cloud listed. QUESTION 17 Your company has a private cloud that is managed by a server named Server1. Server1 has System Center 2012 Virtual Machine Manager (VMM) installed. You add a Hyper-V host named Server2 to the server fabric. Server2 is connected to a SAN named SAN1 by using Fiber Channel connections. You need to optimize access to the LUNs in SAN1 from Server2. What should you do first? A. Install the Multipath I/O (MPIO) feature on Server2. B. Configure Server2 to connect to SAN 1 by using an iSCSI channel. C. Install the Multipath I/O (MPIO) feature on Server1. D. Configure Server1 to connect to SAN 1 by using an iSCSI channel. Answer: A Explanation: <http://technet.microsoft.com/en-us/library/gg610692.aspx> The Multipath I/O (MPIO) feature must be added on each host that will access the Fibre Channel or iSCSI storage array. You can add the MPIO feature through Server Manager. If the MPIO feature is already enabled before you add a host to VMM management, VMM will automatically enable MPIO for supported storage arrays by using the Microsoft provided Device Specific Module (DSM). If you already installed vendor-specific DSMs for supported storage arrays, and then add the host to VMM management, the vendor-specific MPIO settings will be used to communicate with those arrays. QUESTION 18 You install System Center 2012 Virtual Machine Manager (VMM) on a server named Server1. You configure the VMM fabric for networking. You need to create an IP address pool. What should you create first? A. a Run As Account B. a Hardware Profile C. a logical network D. a VIP template Answer: C Explanation:

<http://technet.microsoft.com/en-us/library/gg610590.aspx> QUESTION 19 Your network contains a server named Server1 that has System Center 2012 Virtual Machine Manager (VMM) installed. You have a host group named HG1. HG1 contains four virtualization hosts named Server2, Server 3, Server4, and Server5. You plan to provide users with the ability to deploy virtual machines by using the Self-Service Portal. The corporate management policy states that only the members of a group named Group1 can place virtual machines on Server2 and Server3 and only the members of a group named Group2 can place virtual machines on Server4 and Server5. You need to recommend a cloud configuration to meet the requirements of the management policy. What should you recommend? A. Create two clouds named Cloud1 and Cloud2. Configure placement rules for HG1. B. Create two host groups named HG1Group1 and HG1Group2. Create one cloud for each new host group. Move two servers to each host group. C. Create two clouds named Cloud1 and Cloud2. Configure the custom properties of each cloud. D. Create a host group named HG1HG2. Create one cloud for HG1 and one cloud for HG2. Move two servers to HG2. Answer: B Explanation:

<http://technet.microsoft.com/en-us/library/bb740793> QUESTION 20 Your network contains servers that have System Center 2012 Virtual Machine Manager (VMM) installed and servers that have System Center 2012 App Controller installed. You create a private cloud named Cloud1. You add a VMM connection in App Controller. You verify that you can connect to Cloud 1 from the App Controller portal. A user named User1 fails to connect to Cloud1 from the App Controller portal, as shown in the exhibit. (Click the Exhibit button.) You need to ensure that User1 can connect to Cloud1 from the App Controller portal. What should you do? A. From the VMM Administrator Console, modify the properties of Cloud1. B. From the VMM Administrator Console, create a User Role. C. From the App Controller portal, create a User Role. D. From the App Controller portal, modify the properties of the VMM connection. Answer: B Explanation: <http://technet.microsoft.com/en-us/library/gg696971.aspx> Virtual Machine Manager (VMM) to define the objects that You can create user roles in System Center 2012 users can manage and the management operations that users can perform. QUESTION 21 You configure the System Center 2012 Service Manager connector for System Center 2012 Virtual Machine Manager (VMM). You need to ensure that users can access the VMM data from the System Center Service Manager console. Which two tasks should you perform from the System Center Service Manager console? (Each correct answer

presents part of the solution. Choose two.) A. Import the VMM management packs.B. Create a catalog group.C. Create a type projection.D. Import the VMM classes by using the CSV connector.E. Create views based on VMM classes. Answer: AE

Explanation:<http://technet.microsoft.com/en-us/library/hh519744.aspx> <http://technet.microsoft.com/en-us/library/hh519785.aspx>

QUESTION 22Your network contains an Active Directory domain. The domain contains two servers named Server1 and Server2. Server1 has System Center 2012 Virtual Machine Manager (VMM) installed. Server2 has System Center 2012 Operations Manager installed. You need to configure Operations Manager to monitor the VMM infrastructure. Which three management packs should you install on Server2? (Each correct answer presents part of the solution. Choose three.) A. the Internet Information Services 7 Monitoring Management PackB. the Microsoft SQL Server Monitoring Management PackC. the File Services Management PackD. the Windows Server Hyper-V Management PackE. the Monitoring Pack for Active Directory (AD)F. the Windows Server Operating System Management PackG. Windows Server DNS 2003/2008/2008 R2 Monitoring Management Pack Answer: ABF

Explanation:There are some other dependencies that must be downloaded and installed.These packs contain the required management packs, namely:* (A) Microsoft.Windows.InternetInformationServices.2003 - Windows Server Internet Information Services 7 Monitoring Management Pack* Microsoft.Windows.InternetInformationServices.2008 - Windows Server Internet Information Services 7 Monitoring Management Pack* Microsoft.Windows.InternetInformationServices.CommonLibrary - Windows Server Internet Information Services 7 Monitoring Management* (B) Microsoft.SQLServer.Library - SQL Server Monitoring Management Pack -F: The IIS 2008 management pack actually needsMicrosoft.Windows.Server.2008.Discovery (which needs Microsoft.Windows.Server.Library.mp) which is part of Windows Server Operating System Management Pack for Operations Manager 2007.
